

EY Resource

Discuss the different facts about Mars. Would you like to be the first person to ever go to Mars? How would you get there? What do you think you would do once you were there? What do you like or dislike about Mars?

If you were to stand on Mars, you would only see rocks, soil, dust, and ice.

The planet is known as the 'red planet' because of the colour of the soil and rocks.

Mars has two moons called Phobos and Deimos. They are much closer to Mars than our moon is to Earth.

It is much colder on Mars than on Earth because it is further away from the sun.

Mars is much smaller than Earth. It is around half the size.

There is not as much air on Mars so anyone standing on Mars would need a spacesuit to help them breathe.
