Lines of Symmetry

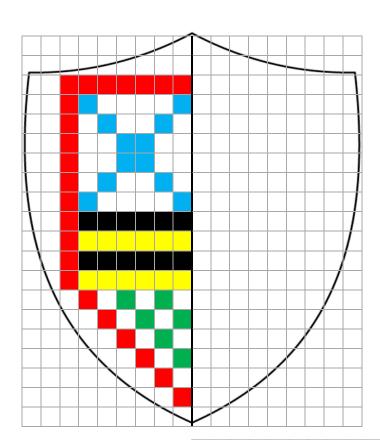

This is the shield of Sir Learnalot. It has a vertical line of symmetry in the middle.

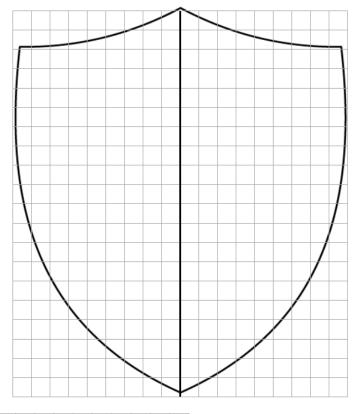

Complete the pattern so that the shield is symmetrical.

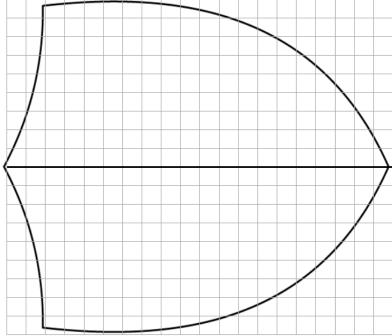

Remember to...

- Count the squares from the mirror line.
- Count the same number of squares on the other side.

Then try creating your own symmetrical shield. We've given you a blank shield. Then try the horizontal line of symmetry (tip... how would turning the paper help?)

Castle Labyrinth

Clitheroe Castle has a labyrinth.

Create your own symmetrical labyrinth.

- Will the line of symmetry be vertical or horizontal?
- What will be in the centre... the castle, treasure?

Use this grid to help design the labyrinth.
